Blockchain security is the foundation and guarantee for the development of blockchain technology. Due to the complexity of blockchain systems, their security issues involve multiple aspects such as cryptography, consensus mechanisms, and network security. Common security threats include 51% attacks, smart contract vulnerabilities, private key leakage, etc. To ensure the security of blockchain systems, measures need to be taken from multiple levels such as technology, management, and law. With the widespread application of blockchain

technology, blockchain security will become increasingly important and will attract more professional talents to engage in it.

Look for thin order books and small liquidity pools. Ask Grok 4 to search for reported liquidity pools and automated market maker (AMM) sizes, then verify with onchain queries.

Liquidation context: After a fast wick and cascade, avoid chasing. Snapbacks are common once forced flows clear.
