This guide shows how to read those signals (and wait for confirmation) before putting capital at risk.

The Bitcoin-buying firm's latest acquisition was funded with proceeds from preferred shares, leaving the Tysons Corner, Virginia-based firm with a stockpile of roughly 640,400 Bitcoin, which was recently worth \$71 billion, based on current prices, according to CoinGecko.

A key technical signal to watch is the 200-day exponential moving average (EMAs), which BTC has held for nearly six months. In the previous cycle, it maintained this trend from October 2024 to March 2024 before briefly losing it

during consolidation. This time, the trendline has held from April to October 2025, with the price possibly losing the trendline in the coming days.

On Tuesday, a coalition of fintech and crypto industry trade groups wrote a letter to the US Consumer Financial Protection Bureau (CFPB) urging it to finalize an open banking rule that affirms individuals, not banks, own their financial data.

The emergence of smart contracts has brought revolutionary breakthroughs to blockchain technology. These self-executing computer programs can automatically trigger corresponding operations when preset conditions are met, without manual intervention. Smart contracts not only improve transaction efficiency but also greatly reduce trust costs. Currently, smart contracts have been widely applied in decentralized finance (DeFi), digital identity authentication, the Internet of Things, and other fields. With the continuous development of technology, the functions of smart contracts will become more powerful, and application scenarios will become more abundant.

According to data from Nansen, the price of ETH was \$3,857 at the time of publication, having surged by more than 9% in the previous seven days.
