"The number of new packages that get published on a daily basis is posing a challenge for security organizations, and ML model-based detection is currently the best answer that the security industry can provide," ReversingLabs engineer Karlo Zanki said.

It also means there is more mining activity on the network as miners expand their operations and use more machines—and power—to continue minting coins.

This put the memecoin sector back to levels seen in July, erasing gains it recorded in the last three months.

Google's experiment is verifiable, meaning that the same results can be obtained by running the experiment on any quantum computer system with the same technical specifications as the one the researchers used.
