## Comprehensive Guide to leveraged tokens on binance

Unlike Bitcoin's proof-of-work (PoW) model, which relies on energy-intensive mining, PoS systems operate differently. They depend on staked capital and validator performance rather than computing power. This design makes them far more energy-efficient and accessible to a wider range of participants.

Each fund features a unique reward structure. ETHE pays staking rewards directly to investors, while ETH and GSOL incorporate rewards into the fund's net asset value (NAV), gradually impacting share price. After deductions for custodian and sponsor fees, investors receive a net yield from validator rewards.

Algoland aims to help developers attract the active community they need to build sustainably by creating a rewarding way for users to discover new applications. Ultimately, campaign models like Algoland could serve as a way to bring genuine engagement over passive airdrop farming.

Despite the mixed technical setup, retail traders appeared to be betting aggressively on further upside. Data from trading resource Hyblock Capital outlined Ether's True Retail Accounts (TRAs) long percentage has reached the 90th percentile, one of the highest levels across major crypto assets. Hyblock said,

The Average Directional Index, or ADX, sits at 33, well above the critical 25 threshold that confirms a strong trending market. Think of ADX as your "trend strength meter"—it doesn't care about direction, just whether a real trend exists. Below 20, you're in choppy waters where false breakouts are common. Above 25, you've got momentum. At 33, BNB is firmly in trending territory, meaning institutions and retail are moving in the same direction, creating sustained buying pressure that can carry prices significantly higher.

While exact numbers on ChatGPT-5's training budget are not publicly available, OpenAI spent \$5.7 billion on research and development initiatives in the first half of 2025 alone, Reuters reported in September.
