

I'm not a robot

WhatsApp has become the most popular messaging app in the world, but it has also leaped off mobile devices and onto our browsers. Many of us value seeing our messages come onto our computer screens in real-time as we work, and WhatsApp gives us the option to reply more easily and quickly using our computer keyboards. Heres everything you need to know about WhatsApp Web and how to get started using it.Editors note: We used a Google Pixel 7 running Android 14 to develop these steps. We also verified the steps work on Apple devices using an iPhone 12 Mini running iOS 17.2.What is WhatsApp Web, and how does it differ from the desktop app?Edgar Cervantes / Android AuthorityWhatsApp Web is the online browser version of the mobile app. It enables you to receive your messages on your computer screen in real time, reply by typing on your keyboard, start new conversations andgroups, and search chat histories. You can receive message notifications from your browser if you have them enabled in the browser settings.However, unlike desktop and mobile apps, it doesnt allow you to make telephone and video calls. You also cant change your status. So there are a few shortcomings with the browser version but nothing that would be a deal-breaker.What are the differences between WhatsApp Web and the mobile app?Edgar Cervantes / Android AuthorityThe differences between the web version and the mobile app are the same as the desktop app. The mobile app gives you the full WhatsApp experience with all the bells and whistles. The browser version misses things like calling, video calls, and status updates.Setting up the browser version of WhatsApp is very quick and easy. The following steps assume you already have an account on the mobile app. If not, you need to do that first.On your computer, launch your browser and go to web.whatsapp.com.Now, launch WhatsApp on your phone.On Android, tap on the three-dot menu icon and select Linked devices. On iPhone, tap on the Settings tab and select Linked devices.Tap on Link a device.Use the phones camera to scan the QR code on the browser.Thats it. After a few seconds, your chats will be accessible through WhatsApp Web.You need to bear in mind a security vulnerability when using the browser version. When you close the browser tab or the browser completely it doesnt log you out of your WhatsApp account. If youre worried about your privacy, its essential to sign out of your WhatsApp account before closing the browser.On your smartphone, launch WhatsApp.On Android, tap on the three-dot menu icon and select Linked devices. On iPhone, tap on the Settings tab and select Linked devices.Tap on the linked computer.Hit Log out.One of the most common complaints people make about WhatsApp is the lack of an iPad version. Until Facebook rectifies that problem, WhatsApp Web is an excellent alternative to use on the tablet. The process is very similar.Open a browser on the iPad and go to web.whatsapp.com.You will see the QR code on the screen.Follow the same smartphone steps mentioned above to connect your iPad to WhatsApp.If youre using the Safari browser, you can even make an icon for the screen by tapping the Share button and choosing Add to Home Screen in the menu.The only downside to using WhatsApp on an iPad is that the notifications are pretty terrible. Youre relying on the browser to deliver the notifications, not WhatsApp. So unless you dont need to reply to messages immediately, you would need to keep the browser open and the iPad window awake to see incoming new messages.FAQsCan you video chat on WhatsApp Web?No, video calls are unavailable on WhatsApp Web.Can you make a phone call on WhatsApp Web?No, like video chatting, audio calls are also unavailable on the browser version of the app.Can I update my status on WhatsApp Web?No, you cant update your status on WhatsApp Web. Want to use WhatsApp from your computer? While there's no standalone WhatsApp client, you can use WhatsApp's web app and desktop client to send messages via your smartphone. Here's how to use WhatsApp on your Windows PC, Mac, or other type of computer. Should You Use WhatsApp on the Web or Download the App? The desktop app and the web interface are very similar, but there are a few critical differences. The big ones are featuresthe WhatsApp web interface doesn't allow you to place audio or video calls. Given that limitation, we'd generally recommend that you use the desktop client whenever you can. Click the phone or video camera icon in the upper right corner to start a voice or video call respectively. Once you're in a video call, you can even share your screen if you want, just click the screen share button at the bottom, then select the window you'd like to share. The major advantage you get from accessing WhatsApp through your browser is convenience. You can use WhatsApp Web from any desktop browser (all major browsers like Safari, Chrome, Firefox, and Edge are supported) on any operating system. You'll also get notifications for new messages. You can even use it on PCs that you cant install apps on (like a public computer), but you should exercise caution if you do that. Use a private window, make sure to log out, and keep in mind that software on the PC may be able to snoop on what you send and receive. If you want a dedicated app, you can use the WhatsApp Desktop application for Windows and macOS. If you don't want to use the link, you can always search "WhatsApp" in the Microsoft or Apple Stores. For added features, you can even use third-party apps. ChatMate for WhatsApp (\$2.99) is a great alternative for Mac users. If you don't want to use the app, just continue to the next section. The process of connecting your iPhone or Android smartphone to WhatsApp Web or WhatsApp Desktop is the same. We'll walk you through the process of using WhatsApp Web. Open your favorite browser and go to web.whatsapp.com. Here, you'll see a QR code on the right side of the screen. Now, you'll have to scan the QR code using your iPhone or Android smartphone. You can send GIFs, photos, videos, documents, emojis, and more. To allow message notifications in your browser, click the "Turn On Desktop Notifications" button. Then confirm from the pop-up to allow notifications for WhatsApp Web. (This pop-up will depend on the browser that you're using.) Once you're done using WhatsApp Web, make sure to log out. To do this, click the "Menu" button from the top toolbar and then choose the "Log Out" option. Use WhatsApp constantly for both work and personal chat? Here's how to secure your WhatsApp account. WhatsApp Web is an incredibly useful extension of the popular messaging app, allowing users to access their chats on a computer. This feature bridges the gap between mobile and desktop communication, whether for work or personal convenience. Following simple steps, users can link their accounts and make the most of WhatsApp's capabilities on a larger screen. This guide provides detailed instructions, highlights features, and addresses common questions and concerns.What is WhatsApp Web?WhatsApp Web is a browser-based version of the WhatsApp mobile application. It mirrors your phone's WhatsApp account, syncing all messages, contacts, and media files to your computer. This enables you to send and receive messages, share files, and access conversations in real time without relying solely on your smartphone. WhatsApp Web doesn't function independently; it relies on an active connection to the WhatsApp app on your phone. Any actions performed on the web version, such as sending messages or deleting chats, are instantly reflected on the mobile app.How to Set Up WhatsApp WebSetting up WhatsApp Web is a straightforward process. Here's how you can do it:Open a web browser on your computer and navigate to web.whatsapp.com.A QR code will be displayed on the screen.Open WhatsApp on your Android or iOSSelect Link a Device' from the Linked Devices menu.Authenticate using your device's security method, such as a fingerprint, face recognition, or PIN.Scan the QR code on the computer screen. This will link your WhatsApp account to the web browser.Your WhatsApp chats will now appear on the computer screen, allowing you to send messages, share files, and more.If you need to unlink a device from WhatsApp Web, the process is quick and easy:Open WhatsApp on your phone and navigate to the Linked Devices' section.View Active Sessions in which a list of all devices currently linked to your WhatsApp account will appear.Tap on the device you wish to remove and select 'Log Out'.This will immediately disconnect that session.This feature is particularly useful if you forget to log out from a public or shared computer.Key Features of WhatsApp WebWhatsApp Web offers several features that make it a powerful tool for users:Messaging: Send and receive text messages, photos, videos and voice notes.File Sharing: Easily share documents, PDFs, images, and videos.Media Viewing: View and download media files directly on your computer.Notifications: Receive desktop notifications for incoming messages, ensuring you don't miss important updates.Customisation: Adjust settings like notifications and chat backgrounds to suit your preferences.Syncing: Any changes made on WhatsApp Web are mirrored on the mobile app.These features provide a seamless user experience, especially for those who frequently switch between devices.What are the Limitations of Using WhatsApp Web?While WhatsApp Web is highly convenient, it does come with certain limitations:Dependency on Mobile: WhatsApp Web requires an active connection to the WhatsApp app on your phone. If your phone's battery dies or loses internet connectivity, WhatsApp Web will stop functioning.No Voice or Video Calls: Unlike the mobile app, WhatsApp Web does not support voice or video calling.Limited Settings: Some advanced settings, such as account management and privacy adjustments, can only be accessed through the mobile app.Browser Dependency: WhatsApp Web works best on specific browsers like Chrome, Firefox, and Edge. Other browsers may not provide full functionality.Despite these drawbacks, WhatsApp Web remains a valuable tool for many users.How to Make Calls Using WhatsApp WebCurrently, WhatsApp Web does not offer voice or video calling capabilities. Users who wish to make calls must use the mobile or the desktop app. This limitation has been a point of feedback for WhatsApp, and there's hope that future updates may include calling functionality for the web version.Troubleshooting Connectivity Issues on WhatsApp WebIf you experience problems with WhatsApp Web, consider these troubleshooting tips:Check Internet Connection: Ensure both your phone and computer have stable and active internet connections.Restart Browser: Close and reopen the browser to refresh the connection.Update WhatsApp: Verify that you're using the latest version of the WhatsApp app on your phone.Clear Browser Cache: Clear your browser's cache and cookies to resolve loading issues.Switch Browsers: If the issue persists, try using a different browser.These steps should resolve the most common issues, ensuring a smooth experience with WhatsApp Web.Frequently Asked Questions (FAQs)Is the video or voice call feature available on WhatsApp Web?No, these features are currently unavailable on WhatsApp Web. Use the mobile app for calls.Can you enable dark mode on WhatsApp Web?Yes, you can activate dark mode by going to the three-dot menu, selecting Settings', and choosing the Dark' theme.How many days will WhatsApp Web remain active once I log in?WhatsApp Web stays active as long as your phone has an internet connection. If inactive, it may log out automatically after 14 days.Is WhatsApp Web secure?Yes, WhatsApp Web uses end-to-end encryption to keep your messages private. Always log out from shared or public computers for added security.Can I use WhatsApp Web on multiple computers?You can link your WhatsApp account to multiple computers, but only one session can be active at a time. Download Article A user-friendly guide to set up and use WhatsApp on your computer Download Article Do you want to use WhatsApp on your computer? You can easily access your WhatsApp messages on a computer by using WhatsApp Web or the desktop client. You'll just need to connect your account by scanning a QR code with your phone. All messages will be synced, so you can seamlessly continue conversations from your mobile device on your computer. This wikiHow will show you how to open and use WhatsApp on your Windows, Mac, or Linux computer. Go to WhatsApps website or download a desktop version of the program.Open the WhatsApp mobile application, and go to "Settings" "Linked Devices" "Link a Device".Scan the QR code on your computer screen.1.Navigate to access WhatsApp on the web. You'll be able to use WhatsApp in any web browser on your desktop or laptop computer, including Safari, Chrome, and Edge.[1]You'll see instructions along with a QR code. This code needs to be scanned by the WhatsApp mobile app to link your devices.[2]If preferred, you can download the desktop client and launch the app. You'll only be able to use either WhatsApp Web or the desktop client at a time; if you launch another version, any active session will end and transfer to the new one.[3]Open WhatsApp on your mobile device. This looks like a white phone with a green background WhatsApp is available for iOS in the App Store and for Android in the Google Play Store.You cannot sign up for WhatsApp for the first time using a computer; you must create an account using a mobile device. Advertisement 3Tap Settings. This is at the bottom-right corner, next to a cog icon.[3]4Tap Linked Devices. You'll find this underneath Starred Messages.[4]5Tap Link a Device. You may need to provide your device's passcode to proceed. Your camera will open on a new page.[5]Tap OK to clear any instructions from the screen.[6]Scan your QR code. Point your camera at the code on your computer screen.[6]If your device isn't scanning the code, close the WhatsApp app and open it again.When the QR code has been read, you will be logged into WhatsApp on your computer. Advertisement 1View the WhatsApp Web or desktop interface. The interface is split into two panels. The left panel contains all your messages or chats, much like your inbox, and the right panel is where you can find your current chat room.[2]Click a message to read. The list of your messages can be found in the left panel. Scroll through them, and click the one you'd like to read.[3]Read message. The selected conversation will be displayed on the right panel via a chat window. You can scroll through the exchanges to read the past messages or restore chat history to retrieve old messages.To manage your chats, find the chat in the left panel. Click the down arrow icon and select Archive chat, Mute, Delete, or Mark as unread.[7] Advertisement 1Select a contact. Type the name of the contact you want to talk to in the search field. The search field is found on the top of the left panel. From the results, click on the name.You can also continue a conversation from one of your existing messages. Just select a message to continue chatting on as described in the Reading Messages section.[2]View the chat window. The chat window will appear in the right panel. The name or names of the people you're talking to are displayed on the header bar.[3]Send a message. The message box is located on the bottom of the right panel. Type your message here, then press Enter to send your message. You can also click the paper airplane icon to send your message.[8]You'll see your message displayed in the chat log.To attach a picture, click the clip icon to the left of the chat field. Click the purple Photos & Videos icon to browse your computer. You can also send a Poll, Contact, Document, Sticker, or use your camera. If you want to send a voice message, click the microphone icon to the right of the text field. You must have a connected microphone to do so.[4]Read messages. All messages exchanged during the conversation will be displayed in the chat log. Each message is tagged with the senders name and timestamp. You can read through them as they appear.[5]Delete a chat (optional). If you dont want to save your current conversation, you can delete it. While still on the chat window, click the button with three vertical dots in the top-right corner. In the pop-up menu, click Delete chat. You can also select Clear messages if you want to keep the conversation in your activity, but clear any messages from the chat log. Advertisement 1Click . This will be in the left panel, next to New chat.A drop-down menu will open.[2]Click Log Out. This will log you out of WhatsApp Web or the desktop client.[9]Alternatively, you can log out of WhatsApp using your mobile device.To do this, open the WhatsApp app. Click Settings Linked Devices select your session. Click Log Out Log Out.You can resume using WhatsApp on your mobile device. Advertisement Add New Question Question Can two different contact numbers on WhatsApp be paired with a laptop? Yes, you can pair two different WhatsApp numbers with the same laptop. You can open one of them in the current window while the other either needs to be open in Incognito/Private mode or a different browser. Question Can we do a video call or an audio call on WhatsApp Web? No, WhatsApp doesnt support audio or video calls on its web version currently. Question How do I add a new contact in web WhatsApp? The official WhatsApp Web version doesnt support adding a new contact. But you can use some tricks with a third-party extension InTouchApp to add new contacts. As one of the most popular messaging services, you've already heard of WhatsApp. From its humble beginnings in 2009two years before Apple introduced iMessagesto its acquisition by Facebook (now Meta) in 2014, WhatsApp has become the dominant messaging platform around the globe. In recent years, it's grown even more potent with new features like video messages, self-destructing voice messages, the ability to edit sent messages, and more. We even finally got an WhatsApp iPad app in May 2025. As popular as the WhatsApp mobile apps are for iPhone and Android, it's easy to forget that you can also use WhatsApp on a desktop or laptop computer. The company provides native apps for Macs and Windows PCs, plus a web-based version that works in any modern web browser on nearly any platform. WhatsApp Web is a great way to keep in touch with friends, family, and colleagues when your smartphone is not handy or you prefer not to type messages on a smaller touchscreen keyboard. Moreover, you can now use WhatsApp Web even when your phone is offline. At one time, WhatsApp needed to be running on your smartphone to relay messages between WhatsApp's servers and the browser-based version of the app. Thankfully, WhatsApp added a multi-device feature a few years ago that lets you directly link up to three other devices to your account. One small catch is that you'll still need to use WhatsApp on your iPhone or Android smartphone to link those devices to your account. Since your WhatsApp profile is tied entirely to your phone number, there's no username or password to log in; instead, you must authenticate WhatsApp Web through its mobile apps. This could be a problem if you want to access WhatsApp Web from a new computer and your phone is dead. Otherwise, once logged in with your web browser, you can chat away even when your phone's battery is dead or offline.How to sign in to WhatsApp Web from an iPhoneUsing WhatsApp Web from your iPhone is easy; just launch WhatsApp Web in Chrome, Firefox, Opera, Safari, or Edge and scan the QR code on the Computer Man Show! broadcasted on KSQD covering central California for over two years. Moreover, you can now use WhatsApp Web even when your phone is offline. At one time, WhatsApp needed to be running on your smartphone to relay messages between WhatsApp's servers and the browser-based version of the app. Thankfully, WhatsApp added a multi-device feature a few years ago that lets you directly link up to three other devices to your account. One small catch is that you'll still need to use WhatsApp on your iPhone or Android smartphone to link those devices to your account. Since your WhatsApp profile is tied entirely to your phone number, there's no username or password to log in; instead, you must authenticate WhatsApp Web through its mobile apps. This could be a problem if you want to access WhatsApp Web from a new computer and your phone is dead. Otherwise, once logged in with your web browser, you can chat away even when your phone's battery is dead or offline.How to sign in to WhatsApp Web from an iPhoneUsing WhatsApp Web from your iPhone is easy; just launch WhatsApp Web in Chrome, Firefox, Opera, Safari, or Edge and scan the QR code on the Computer Man Show! broadcasted on KSQD covering central California for over two years. This article has been viewed 773,974 times. As one of the most popular messaging services, you've already heard of WhatsApp. From its humble beginnings in 2009two years before Apple introduced iMessagesto its acquisition by Facebook (now Meta) in 2014, WhatsApp has become the dominant messaging platform around the globe. In recent years, it's grown even more potent with new features like video messages, self-destructing voice messages, the ability to edit sent messages, and more. We even finally got an WhatsApp iPad app in May 2025. As popular as the WhatsApp mobile apps are for iPhone and Android, it's easy to forget that you can also use WhatsApp on a desktop or laptop computer. The company provides native apps for Macs and Windows PCs, plus a web-based version that works in any modern web browser on nearly any platform. WhatsApp Web is a great way to keep in touch with friends, family, and colleagues when your smartphone is not handy or you prefer not to type messages on a smaller touchscreen keyboard. Moreover, you can now use WhatsApp Web even when your phone is offline.
