Most popular font: AmbimaticHD About the online ambigram generator This free online ambigram generator uses an old technique for making simple ambigrams, mapping letters on a one to one basis. This means that each ambigram font contains 676 ambigram glyphs. These ambigram glyphs map each letter to every other letter in the alphabet. This is why it only works on words of the same length. While there once were multiple online ambigram generators that used this principle, we are the now one of the last remaining ones. Flipscrip works in a different way, they have a large database of individual curves to generate more complex ambigrams from more basic segments. While this method is superior to ours, we do not believe that it makes one-to-one fonts obsolete. Our main aim is to preserve the ambigram generators of old, make them available to a larger audience and to aid aspiring ambigram artists.
