## What does a monkey mean in money

Money is an everyday concern for most people in Britain, just like anywhere else. The country's rich history has led to various forms of money over time, resulting in a diverse vocabulary of slang terms. Let's explore some of these terms. Quid is arguably the most widely used and understood term for money in British slang. It can refer to any amount of money, whether coins or banknotes, and is commonly used across the country. Its origin is unclear, but it may date back to the Latin word "quid," meaning "what" or "something." Dosh is another common term for money, often used in everyday conversations among older generations. It typically refers to cash in hand, rather than bank money. The term is believed to have originated in the 1950s, possibly related to paying through the nose. Bob is an old-fashioned term that still remains popular today, although it's essentially equivalent to "quid." Originally, it referred to one shilling before decimalization in 1971. Its precise origin is unclear, but some believe it may have come from the term "bawbee," which dated back to at least the 18th Century. Bread is another slang term for money that has been widely used across Britain, although its usage varies regionally. The phrase "bread and honey" is a well-known Cockney rhyming slang for money, dating back to around the 1940s. There's also the phrase "breadwinner," which dates back to at least the early 18th Century. The origin of certain slang terms for money in Britain is quite interesting. The term "bread" as a reference to cash has been used since the 19th century, with its earliest written example dating back to 1851. This term likely derived from the concept of the "breadwinner," the person who provides financially for a household. "Dough," meaning money, is also an old slang term that's still widely understood in Britain today. In addition to "bread" and "dough", other terms like "cabbage", "clam", "milk", and "frogskins" are used in various parts of the UK to refer to money. The origins of these terms vary, with some derived from historical practices such as using shells as currency or drawing parallels between valuable commodities like milk and money. "Moolah", another slang term for money, is also widely used in Britain. These terms often reflect cultural influences and historical contexts, and their usage can be somewhat region-specific within the UK. While they might not be as commonly used among younger generations, they still hold significance in understanding the history of slang expressions related to money in Britain. In Britain, you may still hear some older slang terms being used today, although they might not be as widely spoken as they once were. One such example is "moolah", which refers to money and is thought to have originated in American English in the 1920s. Another term that's commonly used is "paper", which can refer specifically to paper money or notes, but also more broadly to money in general. This slang has been around since at least 1722. Another term you might come across is "scratch", which generally refers to paper money and notes rather than coins or bank accounts. While it's not as widely used as some other terms, you may still hear it being used in certain parts of England and Scotland. The origins of this slang are unclear, but it was originally American and quickly spread to Britain. A more specialized term is "rhino", which is part of a type of slang known as "thieves cant". This argot has been around since at least the 16th Century and is used by thieves to communicate surreptitiously. In this context, "rhino" means money. Other common slang terms for specific denominations of money include "fiver", which refers to a five pound note, and "tenner", which refers to a ten pound note. These terms have been around since the 19th Century and are widely understood in Britain. Finally, there's the term "nicker", which is used in some parts of the country to refer to money. For a single pound sterling, people in some parts of England use the term "nicker." Although it can refer to larger sums occasionally, it generally means just one pound. This slang term might be more commonly used in northern England than elsewhere. For example, someone could say, "Here, have a nicker for a go on the arcade machine." The word's origins are linked to horseracing terminology, specifically the noise made by horses. Its first recorded use as a pound refers back to 1871, but its exact origin remains unknown in everyday language. Loose change is often called "shrapnel" in British English, and this term is widely used across different areas. It usually refers to small coins like one or two pence pieces that get lost at the bottom of your pocket. For instance, someone might say, "He's spent all his notes now, just got a pocketful of shrapnel." The use of this term started around the 1990s and is likely derived from the concept of shrapnel, which are shell casings that explode in mid-air. In London, £25 is sometimes called a "pony," while £50 is known as a "bullseye." These terms were once used more widely but have become mostly limited to specific contexts like bookmaker's shops or sales negotiations. The term for a "pony" originated from British soldiers who brought back the idea of a 25 rupee note featuring a picture of a pony after returning from India. £500 is sometimes referred to as a "monkey," £50 as a "bullseye," and £25 as a "pony." These terms are mainly used in London, with each amount being named after specific details on Indian rupees. For example, the term for a "monkey" comes from one 500 rupee note featuring an image of a monkey. In rhyming slang, £5 is known as a "lady," referring to Lady Godiva, who was a historical figure in Anglo-Saxon England. The amount of £15 might be referred to as a "commodore," based on the song by the Commodores, "Three Times a Lady." However, these terms are not used outside of London and can become confusing when trying to understand their relationships. Is equal to three "ladies" in slang meaning, referring to five pounds. Folding stuff, like paper money which is folded, is widely used, especially among older generations. Readies means cash in hand and is still used in certain industries. Shillings are not in circulation but mean money or pounds. Shekels refer to small coins or any kind of money, though it's a joking term. Here are some common Cockney rhyming slang words for money that you might use in a London market or at a pub quiz: A nugget - £1 Lady Godiva or deep sea diver - £5 Cockle and Hen - £10 A score - £20 Pony - £25 Bullseye - £50 Ton - £100 Monkey - £500 (or "a monkey in money") These words are often used to refer to specific amounts of money without directly saying the amount. The term "monkey in money" holds cultural significance and symbolism beyond its monetary value. It's associated with intelligence, mischief, and agility, representing financial abundance and cleverness. This phrase evokes ideas of wealth and opportunities for gain, maintaining its relevance despite digital payments and cashless transactions. Its origins are tied to the Indian 500 Rupee note featuring a monkey in the 19th Century, which was later adopted into British slang as the Empire's influence grew. While it primarily refers to £500 in the UK, regional differences and alternative meanings exist worldwide, reflecting unique cultural contexts and historical influences. In financial discussions, "monkey in money" serves as a convenient shorthand for £500, enhancing efficiency and fostering camaraderie among finance professionals. It also highlights the importance of understanding financial terminology to navigate discussions effectively. The term's origins in Cockney slang, specifically "monkey and a pony," have been simplified over time, with "monkey" becoming the more commonly used representation of £500. Money slang has played a significant role in its enduring presence within the English language, providing an array of colourful terms used in everyday conversations. What medals has Great Britain won at the Winter Olympics?
